

# Multivapor™ Adapter Guide 2017

The Multivapor™ Adapter Guide lists the full range of tube adapters for the P-6 and P-12 configurations. All adapters of the same format (i.e. P-6 or P-12) can be mixed arbitrarily in the transfer rack as the outer dimensions are identical. Each adapter set comprises 6 or 12 adapters with the corresponding seals and springs.

Extra seals are recommended as spare parts. The standard material of the adapters is PETP. For very harsh conditions PEEK alternatives are available on request. Retaining springs facilitate the opening of the cover. Blank adapters are recommended to close vacant positions. With the help of label rings - available in two colors - similar adapters can easily be distinguished.
